

COURSE SYLLABUS

Applied Engineering Design, 7.5 credits

Tillämpad konstruktionsteknik, 7,5 högskolepoäng

Course Code: TTKR22	Education Cycle: Second-cycle level
Confirmed by: Dean Mar 1, 2022	Disciplinary domain: Technology
Revised by: Director of Education Oct 15, 2024	Subject group: MT1
Valid From: Aug 1, 2025	Specialised in: A1N
Version: 3	Main field of study: Product Development

Intended Learning Outcomes (ILO)

After successful course, the student shall;

Knowledge and understanding

- display knowledge of requirements management in product development
- display knowledge of the dependencies and conflicting objectives between requirements in different aspects of product development
- display knowledge of suitable physical prototyping methods for different manufacturing methods and purposes

Skills and abilities

- demonstrate the ability to apply methods to evaluate the fulfillment of different requirements for a product concept
- demonstrate skills of using computer aided engineering tools for evaluation of requirements
- demonstrate skills in developing and evaluating virtual and physical prototypes with respect to different aspects, such as, manufacturability, assembly, functionality, and structural strength
- demonstrate skills of implementing new solutions in product concept based on analysis from evaluation results
- demonstrate the ability to clearly communicate design rationale supported by evaluation and analysis

Judgement and approach

- demonstrate an understanding of how to manage conflicting objectives from various stakeholders in engineering design

Contents

This course provides an opportunity to conduct project-based, hands-on, product development in collaboration with an industrial partner company, from an initial conceptual idea to a functioning prototype. A big part of the course is exposure to complex issues that arise from conflicting objectives, e.g., product performance vs cost.

The course includes the following elements:

- Re-design of an existing product, or a new design of a new product family member
- Building physical prototypes, hands-on, workshop
- Evaluating requirements using both virtual and physical testing
- Evaluating conflicting objectives (trade-off curves)
- Handling requirements for e.g., industrial design, production, sustainability, cost, tolerances, assembly, test standards, regulatory standards

Type of instruction

The education is done through project work in groups. The project case is given by an industrial partner company. Lectures are conducted at campus together with guest lectures. Some guest lecturing is conducted as mandatory study visits at the partner company.

The teaching is conducted in English.

Prerequisites

Passed courses of at least 150 credits in the program Industrial Product Realisation, or passed courses of at least 90 credits in Mechanical Engineering, Product Development, Materials Engineering, Manufacturing Engineering, Industrial Engineering, Civil or Construction Engineering, or the equivalent. The bachelor's degree should comprise a minimum of 15 credits in Mathematics. Taken course in CAD on bachelor level, or the equivalent. Proof of English proficiency is required.

Examination and grades

The course is graded 5,4,3 or Fail.

The course examination is continuous, through project deliverables, project gate presentations and mandatory study visits.

Registration of examination:

Name of the Test	Value	Grading
Project report	7.5 credits	5/4/3/U

Course literature

The literature list for the course will be provided 8 weeks before the course starts.
