*School of Health and Welfare*

UTBILDNINGSPLAN  
**Interventions in Childhood (One Year), 60 högskolepoäng**  
Programstart: Hösten 2024

## UTBILDNINGSPLAN

# Interventions in Childhood (One Year), 60 högskolepoäng

## *Interventions in Childhood (One Year), 60 credits*

---

Programkod: HAC14

Fastställd av: VD 2023-10-09

Version: 1

Programstart: Hösten 2024

Utbildningsnivå: Avancerad nivå

---

### Examensbenämning

Filosofie magisterexamen med huvudområdet studier om barn och ungdom:

- inriktning i Handikappvetenskap, eller
- inriktning i Hälsa och vårdvetenskap, eller
- inriktning i Specialpedagogik, eller
- inriktning i Välfärd och Socialvetenskap.

Degree of Master of Science (60 credits) with a major in Child Studies:

- specialisation in Disability Sciences, or
- specialisation in Health and Care Sciences, or
- specialisation in Special Education, or
- specialisation in Welfare and Social Sciences.

### Programbeskrivning

The International Master's level program on Interventions in Childhood offers interdisciplinary education to provide effective intervention for children in need of support for their development and/or functioning in everyday life beyond what is provided to all children. It includes children at risk for developing long term health conditions and/or impairments because of a health condition and/or disability, or psychosocial circumstances and other environmental influences. The education considers everyday life situations of children in different settings, including family, preschool/school, hospital, and community.

The program is open for students already holding a bachelor's degree within health and care sciences, behavioral science, social work, or educational sciences, including independent, theoretical based work, i.e. a thesis or the equivalent. The program is held in English and open for both national and international students. It is also designed to promote the students' research-based knowledge in leadership issues linked to, for instance, child health care, preschool, school, special education, early intervention/habilitation and social services.

One academic year (equivalent to 60 credit) consists of 40 study weeks, divided in two semesters. Each study week equals 1.5 credits and corresponds to 40 hours of study. The program consists of four mandatory courses of 15 credits (in total 60 credits), including a thesis course; a systematic literature review in the field of the student's specialization. The program is provided by the School of Health and Welfare in collaboration with the School of Education and Communication. It is closely connected to the CHILD (Children-Health-Intervention-Learning-Development) research program.

All courses offered within the program are held on full-time. Courses includes seminars and lectures on campus and streamed lectures offered by international professors. Access to computer and computer experience are of importance.

The teaching is conducted with problem-based methods, focusing on the individual student's own learning. The way of working is adapted to the character of each course and may include literature reviews, lectures, seminars, individual tasks, or group work.

Examination will be executed by written exam, oral exam or term papers. Different methods of examination can be used within a single course. Students are given the opportunity to choose focus of examination tasks in each course, and in the master thesis based on their chosen specialization area.

### **Teaching and learning philosophy**

The School of Health and Welfare's teaching and learning philosophy allows the individual to freely pursue knowledge and take responsibility for their own learning and personal development. The school aims to equip the individual with the tools needed to contribute to the development of our changing society.

According to the teaching and learning philosophy:

- the learning environment encourages students to actively pursue knowledge and take responsibility for their own learning
- learning processes and modes of assessment contribute to the development of critical thinking and problem-solving skills and promote in-depth learning and understanding
- learning processes promote the development of a professional attitude in interactions with care seekers/patients/clients/users and other professions
- a scholarly approach is an integral part of learning
- clinical placements allow students to observe, analyse, reflect, and gain professional experience and skills.

In practice, the philosophy means that the programmes at the School of Health and Welfare use teaching and learning methods that facilitate the students' learning. Courses must be evaluated on a regular basis, and the results of the evaluations must be considered when preparing programme and course syllabi and deciding on teaching and learning methods and modes of assessment. The students should take part in this work. The school's management is responsible for regularly reviewing the teaching and learning philosophy.

### **Mål**

#### **General objectives**

According to the Swedish Higher Education Act (SFS 1992:1434 with later changes), second-cycle education shall be based fundamentally on the knowledge acquired by students during first-cycle courses and study programmes or its equivalent. Second-cycle courses and study programmes shall involve the acquisition of specialist knowledge, competence and skills in relation to first-cycle courses and study programmes, and in addition to the requirements for first-cycle courses and study programmes shall:

- further develop the ability of students to integrate and make autonomous use of their knowledge,
- develop the students' ability to deal with complex phenomena, issues and situations, and
- develop the students' potential for professional activities that demand considerable autonomy, or for research and development work.

#### **General learning outcomes for a Degree of Master (One Year)**

After the completion of the programme for a one year master's degree, students must, according to the Degree Ordinance (Appendix 2, Higher Education Ordinance SFS 1993:100, with later revisions) be able to:

### ***Knowledge and Understanding***

- demonstrate knowledge and understanding in the main field of study, including both an overview of the field and specialised knowledge in certain areas of the field as well as insight into current research and development work, and
- demonstrate specialised methodological knowledge in the main field of study.

### ***Skills and Abilities***

- demonstrate the ability to integrate knowledge and analyse, assess and deal with complex phenomena, issues and situations even with limited information,
- demonstrate the ability to identify and formulate issues autonomously as well as to plan and, using appropriate methods, undertake advanced tasks within predetermined time frames,
- demonstrate the ability in speech and writing to report clearly and discuss his or her conclusions and the knowledge and arguments on which they are based in dialogue with different audiences, and
- demonstrate the skills required for participation in research and development work or employment in some other qualified capacity.

### ***Judgement and Approach***

- demonstrate the ability to make assessments in the main field of study informed by relevant disciplinary, social and ethical issues and also to demonstrate awareness of ethical aspects of research and development work,
- demonstrate insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and
- demonstrate the ability to identify the personal need for further knowledge and take responsibility for his or her ongoing learning.

### **Programme-specific learning outcomes**

The overall goal of the one year master's program is to provide a qualified education from an international perspective in the field of interventions to children in need of additional support due to health condition, disability, poverty, or at risk for social or other reasons.

The master's program is grounded in an ecological perspective on child development, learning, and functioning. Influences are observed at different levels, "from neurons to neighborhoods". A critical perspective focusing on the individual, the environment, and their interrelationship, is emphasized. A bio-psycho-social model is used as a frame of reference and the connection between research and practice is stressed.

Upon completion of the program, the intended learning outcomes provided for the programme must also be met. More specific, the goals are that the student will be able to demonstrate:

- theoretical understanding of the ecology of childhood intervention in an international perspective,
- theoretical understanding about child development and intervention processes providing possibilities for critical examination and analysis of models for intervention and application of those,
- an understanding of major theories and current research related to intervention processes including a focus on the connection between theory and practice,
- basic knowledge in general system theory, and the abilities to relate it to children's health,

development, and learning in different environments, and  
 - knowledge about research methods, and especially methods useful in the field of research on interventions in childhood.

### *Independent project*

For a Degree of Master (60 Credits) students must have completed an independent project (thesis) worth at least 15 Credits in their main field of study, within the framework of the course requirements.

### **Innehåll**

The program includes four core courses that are common for all students and organized into a logic progression:

#### Kurser

##### *Obligatoriska kurser*

| Kursbenämning                                   | Hp | Huvudområde                | Fördjupning | Kurskod |
|---|----|----------------------------|-------------|---------|
| Examensarbete, Interventioner i barndomen       | 15 | Studier om barn och ungdom | A1E         | HICT25  |
| Introduktion till Interventioner i barndomen    | 15 | Studier om barn och ungdom | A1N         | HIBR24  |
| Utvecklingsvetenskap och interventionsprocesser | 15 | Studier om barn och ungdom | A1N         | HDSR25  |
| Vetenskapsteori och vetenskapliga metoder       | 15 | Studier om barn och ungdom | A1N         | HVMR24  |

#### Programöversikt

##### **Årskurs 1**

| Termin 1  |  | Termin 2   |  |
|---|--|--|--|
| Period 1  | Period 2   | Period 3   | Period 4   |
| Introduktion till Interventioner i barndomen, 15 hp | Vetenskapsteori och vetenskapliga metoder, 15 hp | Utvecklingsvetenskap och interventionsprocesser, 15 hp | Examensarbete, Interventioner i barndomen, 15 hp |

### **Förkunskapskrav**

The applicant must hold the minimum of a bachelor's degree (i.e. the equivalent of 180 ECTS credits at an accredited university) with at least 90 credits within health and care sciences, behavioral science, social work, disability research, or educational sciences, including independent, theoretical based work, i.e. a thesis or the equivalent work that demonstrates that the applicant has conducted independent, systematic research and formally written about this research (e.g. participation in work based research; participation in research methods courses). Proof of English language proficiency is required.

### **Villkor för fortsatta studier**

Specific requirements for continuing studies in the programme are described in each course syllabus.

### **Examenskrav**

To be awarded the Degree of Master of Science (60 credits) with a major in Child Studies the student must complete the course requirements of the program.

### **Degree certificate**

The degree certificate will be issued after formal application from the student after completion of education, provided that the examination results are registered in the study documentation system.

**Övrigt  
Grade**

In accordance with Jönköping University's regulations, the course syllabus shall specify which grades are used. Grades shall be determined by one of the teachers specifically appointed by the university (the examiner). Grades are awarded according to a target-related 7-point scale: A, B, C, D, E, FX, F. The School of Health and Welfare can make use of an alternative grading system, which is decided by the Dean. In such a case, this will be indicated in the course syllabus.

**Teaching and examination**

For each course in the education there is a special syllabus which is a legally binding document. The teaching and examination forms for the courses given within the program are shown in the syllabus. More detailed regulations and information about examination and grading can be found in the Regulations and guidelines for first, second and third cycle education at Jönköping University in the respective syllabus and on respective learning platform.

**Equal conditions at Jönköping University**

As an education provider, Jönköping University offer an inclusive study environment where all students are treated in an objective and professional manner, where everyone is given equal opportunities. Jönköping University accepts under no circumstances that discrimination, harassment, sexual harassment and offensive differential treatment occur.

**Disciplinary and Expulsion Committee at Jönköping University**

Students are obliged to follow the regulations governing the activities at Jönköping University. The Disciplinary and Expulsion Committee at Jönköping University can decide on disciplinary measures.

**Credit Transfer**

A student that has passed component parts of a university programme at another Swedish or foreign university, or who has acquired the equivalent knowledge and skills in another way, can following evaluation receive credits for this within the framework of their studies at the School of Health and Welfare. The application for credit is applied for by the student on a special form according to the instructions on the form. The application must be received no later than five weeks before the start of the course in order to be processed in good time before the start of the course. For students who are new at Jönköping University and who want to take credit for courses close to the start of the course, must apply as soon as possible after registration.

**Study break**

Study breaks can only be applied for and granted from educational programs, not from courses. A study break can only be granted after the student has completed at least one course with a passing grade, otherwise the student is directed to apply to the program again. Study breaks are requested by the student on a special form and can only be granted due to illness, parental leave, military service or another special reason. A student who has been granted a study break must notify the study counselor of re-entry no later than 15 of Oct before the spring semester and 15 of April before the fall semester.

**Interruption of studies**

The student is recommended to contact the study advisor before interrupting studies. Cancellation of studies from a program or course is entered by the student according to the instructions.

**Exemption**

When a student does not meet established eligibility requirements before the start of the semester and/or course, exemption is only granted in cases where Jönköping University has caused the student to be unable to complete their studies according to the education plan.
